

The Teachings of Grigori Grabovoi about God. Method of using the device for the development of the concentrations of eternal life PRK-1U by combining the interaction of the Spirit and Consciousness

February 10, 2018

Hello. The theme of the lecture is my Teachings about God. Method of using the device for the development of the concentrations of eternal life PRK-1U by combining the interaction of the Spirit and Consciousness.

In this lecture, I will briefly describe how it is possible to use optical systems in the device in the development of the concentrations of eternal life of the PRK-1U through the spiritual action, which is reflected as a consequence in the control through the element of Consciousness. That is the matter of spiritual action develops as a certain level of infinite plan of control, but at the same time, at some distance from the primary impulse of spiritual control, it is possible to connect the structure of Consciousness and spiritual control in infinity, act by a controlled process in terms of the logic of the current control that is inherent in Consciousness.

And in order to use for the intensification of this process and for the more precise plan of control of the device for the development of concentrations of eternal life PRK-1U, it is necessary to distinguish the structure of eternal life as an element that interacts with the device - in principle, as with any technical system that ensures eternal life in the infinite future. But at the same time Consciousness develops in such a way that it can independently in perspective carry out control of any system of reality.

God, the Creator of the whole world, controls reality, proceeding, among all, from his developed Consciousness. Therefore, applying this principle in such a way that Consciousness is a system that at the logical level can implement a certain training of the individual in terms of perspective long-term control and action, and in terms of the current time, it is possible to conduct mentally the element of spiritual action through the second large lens counterclockwise, if to consider from the small lens from below, and from the number 9. And transfer the control in the form of an arc behind the plane of observation to the number 8.

Thus we come to the spiritual action concentrated in a finite interval of the number 8 in the form of the symbol 8, and by looking in this number at two certain spaces inside the two circles that form the number 8, we can visualize mentally that it is possible to transfer by squeezing two large lenses in these circles. And it turns out that there are two lenses as if inside the number 8.

And here you can see a very high speed of re-reflection between these lenses, because you condensed the information. That is, the first conclusion from this action with the use of the device for the development of concentrations PRK-1U at that moment: we can immediately say that it is the condensation, the increase in a certain level of information density, allows Consciousness to approach spiritual action.

And it turns out that a high concentration even the Spirit with well-ordered repeated action with the elements of your Consciousness may lead to the fact that you are getting quite active control, and at the same time this active control is controllable, because you introduce into the structure of Consciousness, by which you work, virtually any information, any goals of control - verbal or otherwise formulated. And when you implement such formulated goals in the control, you get the accuracy of the spiritual action according to the goals of the primary control, and even on the tasks of the Soul as well.

Thus, working with the formulated goals of control, we can control here through, for example, the structure of such an action when the control is carried out in the level, for example, for prolonging even, for example, the spiritual, verbal action, physical action, that is, the control begins to influence, in principle, the structure of what is happening in such a way that practically the entire system of reality begins to participate in this structure.

And the interaction in terms of, for example, the interaction of words begins, the use of sound controlling systems, where you can put in one word, for example, one level of control. And if a little bit - literally for a millisecond or for some time to increase, suppose the sound duration, then control can change. But at the same time the level of some kind of unarchiving of sound or action, it begins to occur in terms of, in fact, kind of a reverse process.

That is, you start, proceeding from the interaction with the external environment, the sound environment, the system of action to control in fact the reality system in such a way that you get the level of further action in the form of much bigger control than the actions, for example, of Consciousness and the Spirit. For example, using the word “formulated” in the form of a reduction and compaction of this word and the extension of some sounds in the control, you can, seemingly, practically observing the same sound of the word, but with some variations, they maybe not even always noticeable, come out to the extension of the phase of control by prolonging some sound elements.

And what I have now said, for example, aloud, can be used, simply mentally reciting some words, increasing by another spiritual action for literally milliseconds the duration of the sounds. And some words can be increased in terms of the sound in such a way that, by applying an instantaneous increase in time intervals with respect to the mental sound of the word, one word can become an endless action. And then you come to the understanding of the status, when the word can organize the world, in fact, reality in terms of your element of action and the goal of control, which is in the word itself.

For example: eternal life. We take two words, and do not just pronounce, but increase the spiritual status, make the final element as infinite as, for example, the infinite Spirit, although we preliminary projected the word through the element of Consciousness. That is, in the form of specific words, we pronounce actions. The same can be used in any creative control, when the status of a word becomes infinite. And this principle, when the primary information of a word has the infinite value, it is carried out in the infinite level in the control. And you can thus realize reality in an infinite time in the required aspect, which ensures a harmonious eternal life.

Now I finish this lecture. Thanks a lot for your attention. I wish a harmonious eternal life.
