

## Report

I, FLN, live in Moscow, used the devices of development of concentration of eternal life PRK-1U which are adjusted on medical profiles from 12.03.2020 g on 10.05.2020.

I used device No. 3

I worked with the woman of 60 years with carcinoma of uterus. I was called by her mother the 12.03.2020 and reported that Natalya had a bleeding, she was diagnosed of adenocarcinoma, and also that she was waiting for hospitalization. Mother asked about the help for the daughter. I began working on the device PRK-1U No. 3 at once, and for the 4th day the bleeding considerably decreased. Natalya L. was put in a hospital 19.03.2020 for operation of removal of a uterus and appendages. The operation was twice postponed therefore there was time for carrying out further concentration on the PRK-1U device. The information of Natalya gradually improved, especially it became noticeable since 23.03.2020. The 30.03.2020 she underwent surgery on removal of an uterus with appendages. The postoperative period is favorable without inflammation. The subsequent histology of remote fabrics showed that fibrous fabric without growth of a tumor; the tissue of ovaries, of uterine tubes is involute, without growth of a tumor.

I concentrated on a numerical row from the book by Grigori Grabovoi's "Restoration of a human body by concentration on numbers" - cancer of an uterus **9817453**.

Applied technology from the seminar "**The joy of control**" of 24.05.2005 as "a powerful tool at treatment of tumoral diseases and other diseases" (worked together with a small group of controllers, applying the technology to several people with various diagnoses on the generalized image).

I worked myself on the device PRK-1U No. 3 in free time, just holding the purpose of control in the head.

When she was leaving the hospital the doctor recommended her the radiation therapy just in case, having told at the same time that Natalya can consider herself the healthy person.

**Received results:** Improvement of health: fast restoration after operation. There are no complications. Treatment: according to the doctor Natalya can consider herself healthy.
