

**The result of Grigori Grabovoi.  
Testimony of  
Mgebrishvili Gvantsa.  
Restoring the health  
of AIDS stage 4.**

I am Mgebrishvili Gvantsa Ramazovna, I testify, that Grigori Petrovich Grabovoi had really restored my health from

IV stage AIDS with dispersed changes of various color spots on my skin and increased size of gland in 2 months.

The proof of this is that prior to the commencement of the remote restoration conducted by G.P Grabovi, for more than three years, I had received confirmations of the diagnosis of AIDS in the dispensary department of the Republican AIDS and Clinical Immunology Center of the Georgian Ministry of Health, Tbilisi.

On my body, there were black, green, yellow spots, and glands were enlarged.

After a remote restoration session, conducted by Grigori Petrovich, on 21st December, 1995 I had received a conclusion from the Republican AIDS Center and Clinical Immunology Center of the Georgian Ministry of Health, that states, that I am in a good health.

And indeed, there are no abnormalities on my skin, the analyses of the immune system are normal.
