

**The result of Grigori Grabovoi.
Testimony of Serbina Diana
The disappearance of metastases in the
grandfather
in the liver and kidneys.**

I, Serbina Diana Yanovna, had learnt about Grigori Petrovich Grabovoi via TV program of Ivan Kononov “The Third Eye” on September 15, 1996.

During my communication with Grigori Petrovich Grabovoi on September 25, 1996, I had received the information on the control system over the events, related to the problems of restoration of health of my grandfather Belyakov Mikhail Gavrilovich (born in 1928).

The doctors of the city hospital №31 had diagnosed him with IV stage cancer of the ascending colon with metastases in the liver and kidneys. This is a highly differentiated adenocarcinoma.

After one session, conducted by Grigori Petrovich Grabovoi, there was another re-examination done, which did not show the presence of metastasis anywhere.

The next day after Grigori Petrovich Grabovoi's session on September 26, a repeated ultrasound examination was done, which did not show any metastasis. A computer survey conducted on September 30 confirmed the absence of metastasis in the whole body.
