

**The result of Grigori Grabovoi.  
Testimony of Simakova Nina  
Complete recovery of the uterus  
after resection.**

Three years ago I had a resection operation on uterine fibroids. The entire uterus was removed along with the neck.

I have the case history and the surgery conclusion, where it is confirmed that everything was removed. And after the first meeting with Grigori Grabovoi and the second meeting, due to ultrasound examinations, I have unexpectedly found out from the doctors, that the uterus exists in normal sizes.

Then I was examined by the gynecologists, who also check and confirmed in writing the presence of the uterus in my body. I was very surprised, I have been examined by various experts.

I have even had a special examination based in the information technology, where they determine the respiration of the cell organ. Where, the respiration of the cells of the uterus showed, that my uterus was completely healthy and very young.

My name is Simakova Nina Vaislevna. I was born in 1951 in South Kazakhstan. Now I live in Holland, the city of Breda, Piternalkomanstrukt Street No. 5.
