

**The result of Grigori Grabovoi.
Testimony of Frolova Anna
Restoring the health of mothers
in one session.
Diagnosis: lung cancer.**

I, Frolova Anna Yurievna, I am the daughter of Lavrushkina Nina Vasilievna.

In the summer of 1996, in June, my mother was diagnosed with exudative pleurisy and was placed in a clinical military hospital, which is located in the city of Krasnogorsk.

There, she was treated for the inflammation of the lung, for pleurisy.

And since the treatment did not help, she was examined for cancer and a malignant tumor was found in the lower lobe of the lung and pleura, in the left lung.

In the pictures taken after the diagnosis, the dark areas were visible, which indicated the presence of cancer cells.

I saw the program "The Third Eye" with the participation of Grigori Petrovich Grabovoi, and the next day we have called and made an appointment.

On September 23, my mother had ONE session with Grigori Petrovich. On September 24, she had blood, urine and a lung analyses done. My father talked with the doctor, and the doctor told him that he could not see any dark areas in the X-Rays. Doctor could not see any cancer nodules in the X-Ray of the left lung.
