

**Testimony of Aigul Rybkovskaya
(emergency doctor).
Application of the methods
of Grigori Grabovoi
in professional activities.**

I, Aigul Zholdbaevna Rybkovskaya, emergency medical doctor, sending the evidence of the results of the application of methods of Grigori Grabovoi in medical practice.

Emergency call to the 9 months old child.

Reason: turned blue.

During first 12 months of life, children, as a result of high temperatures, can have febrile seizures, which can result in spasm of the respiratory tract and instant death.

While we were driving to the destination of the patient, I had placed the Divine stream over the image of the child.

I had placed the child in the Golden Sphere of God, filled the sphere with Light and sent the goal of the control work into it: optimization and harmonization of the internal and external world, norm of health and safety of the child's life (full names are not revealed) through number sequences:

71931 - from any negative impact;

817992191 – self recovery of body;

1814321 - absolute norm of health;

2145432 - healing, immortality, rejuvenation and resurrection;

88888588888 9 - healing of all, harmonization of the situation and benevolence,

8888 88888 - harmonization of current moment. (I know these number sequences by heart).

Before the arrival of the Ambulance, the mother, in a restaurant way, caused the vomiting in the child, thereby saving her daughter's life. How could the mother know that she should have done this and not otherwise? When I asked what prompted her to do so (at such a critical moment), she shrugged her shoulders.

It turns out that by my control work, I had created rigid systems around the child and I think that my control work had organized in the thoughts of the mother, on the

basis of which she performed this procedure. Life was saved before my (doctor of the emergency service) arrival and we safely hospitalized them.

By this method I always do my control work, while I am travelling to the destination of the caller and when we arrive, patient already successfully emerged from the critical situation, when there is no longer any need in administering drugs.

I still hospitalize patients under the supervision of specialists anyway.

However, I note these intermediate results due to my control work for myself.

Because, as Grigori Petrovich says: it is necessary to record positive results on paper, so that they do not dissipate.

After several critical situations and happy outcomes before my arrival, I have the right to conclude that this is the beginning of the new medicine of the Third Millennium?

By placing the stream of Light over each patient, I simultaneously spread the Light of Grigori Petrovich's Teaching to all people who are in need of medical assistance at the moment.

Aigul Rybkovskaya
