

To all the persons interested

**The Protocol of observation of operation of the artificial intelligence function of the Device of development of concentrations of eternal life PRK-1U with three modes.**

According to the scientific-practical research of the characteristic that in the Device of development of concentrations of eternal life PRK-1U with three modes the artificial intelligence functions for providing for eternal life for everyone are being realized, thus under circumstances of overloading, it can transfer into some of the modes, and then the device functions can be restored upon analogy with a living organism - this Protocol has been composed.

After receiving the PRK-1U device on 05/22/2019 in Belgrade, I moved with him to the city of Ljubljana in Slovenia to participate in a seminar on the Teachings of Grigori Grabovoi. The device worked fine for four days and there was no peculiarity with mode switching.

After arriving home in Rostov-on-Don, when I tried to turn the device on to the second mode according to the protocol, it immediately switched to the third mode of operation. I was scared that there might be problems in the work of the device, then I switched it to the first mode by turning off the green button. Then I waited for 10 seconds before turning the device back to the second mode, in this case the second mode was turned on. Such device's behaviour as switching to the 3d mode from 2nd repeated several times during the first week. In the following days, the device worked according to the protocol, all modes of the device worked fine. Perhaps it was the adjustment of the intelligence of the device or its adaptation to the information in my house.

The Addition to the Protocol of observation of operation of the artificial intelligence function of the Device of development of concentrations of eternal life PRK-1U with three modes, from July 02, 2019.
